For Immediate Release

Tycon Power Systems Introduces RemotePro™ Stand-Alone Remote Power Systems

December 16, 2010 – Draper, Utah – Tycon Power Systems announces the long awaited release of its premier RemotePro™ series of fully self contained remote power systems. These systems are designed to provide continuous 24/7 power from the sun in areas where grid power isn't affordable, available or practical. The RemotePro™ can maintain charge from solar and grid power, via POE, so they are also useful as an extended UPS backup system.

The RemotePro™ are available in 1.25W to 50W continuous power (24/7) versions. Larger versions are in development.

The sealed and weatherproof enclosures have a generous amount of space inside and a removable mounting plate for mounting all types of customer electronics.

"The RemotePro™ are complete standalone power systems that are designed to operate over a wide Industrial temperature range in harsh outdoor environments." said Scott Parsons, CEO. "They are DC voltage based so they don't have the poor efficiency problems seen with DC to AC inverter type systems. Our design approach provides great performance at a better price point."

The RemotePro™ systems feature: Pole or Wall Mounting, High Efficiency solar panels with 25 year output warranty, Heavy Duty Solar mounts certified to 110MPH, GEL/AGM Batteries for wide temperature performance and 5 year service life, Advanced dual input controller with regulated voltage (12,18,24 or 48V) POE output / regulated wire terminal output, Weatherproof enclosures and choice of 12V battery or 24V battery systems.

*** MSRP starting at \$199.95**

About Tycon Power Systems

Headquartered in Draper, Utah, Tycon Power Systems manufactures remote power systems for outdoor equipment and specializes in Power Over Ethernet power solutions. It has offices and warehouse facilities in the USA as well as distributors and representatives worldwide.
